- 1.2 The OVG is listed as a National Public Entity in terms of Schedule 3(A) of the Public Finance Management Act established through the Property Valuation Act No. 17 of 2014 (PVA). It operates as a stand-alone entity reporting directly to the Minister of Agriculture Land Reform and Rural Development. The OVG is in the process of implementing its own governance structures, systems and processes that will enable it to effectively execute on the critical mandate of ensuring high quality and impartial property valuations for the purpose of Land Reform.
- 1.3 As a newly established schedule 3(A) entity, the OVG is on a drive to accelerate its digital transformation programme. The Enterprise Architecture services will assist the OVG acquire infrastructure and resources that align to the strategy of the OVG.

1.4 The OVG 's core business is Valuations Management as mandated by the Property Valuation Act. Valuations Management is concerned with all the activities undertaken by the OVG to process valuations and quality assurance requests from acceptance of requests, through quality assurance to issuing final certificates to the requesting Clients, who then effect land acquisitions for land reform purposes as outlined in section 12 (1) (a) of the Property Valuation Act. The figure below summarises the OVG's Section 12 (1) (a) clients and their strategic objectives. The figure shows the OVG's current clients.

Figure 1 OVG Section 12 (1) (a) Clients

1.5 The Valuations Management function also makes available a valuation service for the valuation of government owned land for non-land reform purposes as prescribed in Section 12 (1) (b) of the Property Valuation Act. Currently the OVG is contracted to perform valuation for The Department of Water and Sanitation and Department of Forestry, Fisheries, and the Environment. The list of Section 12 (1) b is not exhaustive as it depends on the number of clients at a specific time.

1.6 There are four sub functions/processes that make up the Valuations Management business function. These sub functions/processes are determined by the handoffs between them, and the subject of the activities undertaken by the roles therein. They are to:

- Perform Client Request Management
- Perform Valuation Project Allocation Management
- Perform Valuations
- Perform QA and Issue Certificates

- Provide Property Data Analytics
- 1.7 The OVG is currently defining its target operating model which will be an input to a reviewed organizational capability that will inform the revised structure of the OVG. The deliverables stemming from this activity are expected to provide a substantive input into the development of the Enterprise Architecture Plan.
- 1.8 The OVG's mandate is currently being reviewed through an extensive analysis of the Property Valuation Act and its regulations. The possible extension of the scope might inter alia include a participation in land claim compensation and regulatory role in property valuations. Additional capabilities derived from the revised mandate will be confirmed at a later stage.
- 1.9 Figure 2 below outline the OVG's business capability while the other business units support the Valuation Management function.
- 1.9.1 Supply Chain Management is directly involved in the outsourcing of Valuation services when there is no capacity internally to conduct the valuation. It also manages the procurement value chain from end to end for all other business processes.
- 1.9.2 The Programme Management Office manages all project management aspects of the valuations as well as any other projects undertaken by the OVG. All valuation requests received within the OVG are treated as projects.
- 1.9.3 The Governance, Risk and Legal business unit provides the risk management, compliance, and legal support services for the core function as well as other sections. Because of the volatile nature of the land reform process, a process which receives input from Valuations conducted by OVG, litigation matters are inevitable.
- 1.9.4 The Strategy and ICT Business unit provides the strategic and technical support needed by the business as a whole.
- 1.9.5 The Financial Management Services unit offers fiscal and regulatory support.
- 1.9.6 Finally, the Human Capital Services business unit manages the human resources recruitment and management value chain.
- 1.10 The OVG has implemented an Enterprise Resource Planning system to support Valuations Tracking, Financial Management, Supply Chain Management, Programmes Management, Human Capital Management, Asset Management and

Data Analytics capability. The OVG has also recently completed the following ICT infrastructure capacity building projects:

- Data Centre Upgrade
- Internet Connectivity
- Telephone Management System

2. OBJECTIVES

The objective is to implement Enterprise Architecture services that will assist in ensuring that the OVG information systems solutions are well planned and aligned to the defined holistic business requirements setting the foundation for a well-defined OVG architecture layout that endeavors to deploy an integrated enterprise solution which will simplify and improve efficiency of services rendered.

The EA services will seek to achieve the following objectives:

- 2.1 **Standardisation:** Standardisation needs to be applied to a myriad of areas and concepts within the OVG. These include standardisation of the following:
 - Processes where a minimum standard will be defined and implemented.
 - Input data and information;
 - Service Level across the entire enterprise;
 - Structures need to be standardised including roles and responsibilities to ensure operational success as well as resource optimisation;
 - User and Stakeholder Communication. The common and generic communications will be template driven and standardised.
- 2.2 **Optimisation:** By automating the processes and supporting actions it is imperative that the utilisation of resources be optimised. This includes all the resources like infrastructure, Hardware, Software, and human resources. Ergonomics of the environment, space and movement must also be optimised. Integration with stakeholders must also be optimised to improve service levels.
- 2.3 **Integration:** Integration is a critical success factor for improving service delivery. Data must be integrated to give a single congruent view. The Processes must be integrated where possible to facilitate a single version of common processes. Collaboration should be enhanced to facilitate human integration not only within the OVG but also with all the stakeholders and third parties. In determining property value, the OVG is processing data from various third parties. It is important for third-party data that is handled by the OVG to be processed with minimum human intervention. Therefore, this process should enable the OVG to define critical third-party data and a better way of processing that data. This should also cater for instances where the mandate of the OVG has been reviewed to include other processes such as involvement on the compensation process, regulatory role, etc.

- 2.4 **Security:** The OVG's data and systems should be protected from malicious and unauthorised access. Mechanisms that consider information and cyber security should be put in place. These mechanisms must protect and ensure only authorised access to data and functionality and must be imbedded in the processes and solutions and must have strong anti-fraud mechanisms incorporated. The solution should clearly articulate how information should be accessed and by whom and the tools put in place to preclude unauthorised access.
- 2.5 **Agile:** Changes are inevitable. In support of this, the proposed solution must support business agility. This should be part of the processes and the data and information changes.
- 2.6 **Managed:** The solution and all its components need to be actively monitored and notifications and escalations raised proactively.
- 2.7 **Scalability:** The solution must be scalable

3. SCOPE OF WORK

3.1 ENTERPRISE ARCHITECTURE

- 3.1.1 The OVG does not have the necessary resources to provide EA services. To deliver on enterprise architecture services, a wide range of expertise such as the following will be required:
- Enterprise Architect
 - Business Architect
 - Solution architect
 - Technology Architect
 - Security Architect
 - Data Architect
 - Application Architect
- 3.1.2 The EA must provide a common blueprint that can help senior managers decide if the planned initiatives are in line with the organisation's strategic plans to avoid undesirable developments occurring unknowingly.
- 3.1.3 By acquiring EA services with the required specialist skills, the OVG intends to develop its level of EA function from nonexistence to at least level 3 with the aim of reaching a point where EA drives change in the OVG.
